PROFILE

Software Engineer with experience building backend services, containerized applications, CI/CD systems, and developer tooling. Comfortable owning systems from implementation through deployment and operations. Background in cybersecurity and security-focused environments. Experienced with AI development workflows and AI-assisted engineering tools.

EXPERIENCE

Software Engineer · MyParcel.com (Jan 2025 – Present)

- Designed and built carrier, marketplace, and warehouse integrations supporting business-critical shipment workflows.
- Developed and maintained backend services, APIs, and containerized applications using Laravel, Node.js, Docker, and Kubernetes.
- Built and maintained GitHub Actions workflows for automated testing, auditing, deployment, and release processes.
- Developed internal CLI tooling and deployment automation used for provisioning and developer workflows.
- Managed production services, container registries, and operational tooling across multiple environments.

Software Engineer · DongIT (Aug 2023 – Dec 2024)

- Designed and implemented backend APIs and SSR applications within containerized environments.
- Led migration of legacy applications from jQuery and Vanilla JavaScript to Vue.js.
- Introduced automated testing practices to improve software quality and reliability.
- Developed software in a security-focused environment, with exposure to vulnerability management and secure development practices.

Software Engineer · Capisoft B.V. (Feb 2022 – Aug 2023)

- Built cross-platform web, mobile, and desktop applications for multiple clients.
- Led front-end development and coordinated feature delivery with stakeholders.

EDUCATION

MSc Software Engineering (2023–2024) — University of Amsterdam

BSc Computer Science, Cum Laude (2020–2023) — Vrije Universiteit Amsterdam

PROJECTS

AST Insight — MSc Thesis

Static analysis platform that identifies and automatically remediates security vulnerabilities in C code using AST-based analysis.

GitHub

Continuum — BSc Thesis

Embedded TypeScript DSL for cloud simulation configuration; contributed to open-source research.

GitHub

SKILLS

Languages: TypeScript, JavaScript, PHP, Python

Backend: Node.js, FastAPI, Flask, Laravel

Infrastructure: Docker, Kubernetes, Linux, GitHub Actions, CircleCI

Frontend: React, Vue.js, React Native, Flutter

Other: Deployment Automation, Internal Developer Tooling, Static Analysis, End-to-End Testing, FastMCP
